Overview

How will mmWave based 5G affect PA & PSU designs?

Site-selection considerations also are driving changes to the PA and PSU designs. The higher the frequency, the shorter the signals travel, which means mmWave-based 5G will require a much higher density of small cells compared to 4G. Many 5G sites will also need to be close to street level, where people are.

What is the aValue ESM-ARL COM Express module?

Diving into the Avalue's demo room to Develop Smart Healthcare, Factory, and Retail Solutions. Powered by Intel® Core™ Ultra U/H Series (Arrow Lake), the ESM-ARL is the industry's first COM Express module integrating a native NPU, delivering up to 11 TOPS and 20x performance-per-watt efficiency.

How much power does a PSU need?

This is when the PSU is no longer powering the PA, which is the main power draw, but still needs to power other electronics. The current target for low-load efficiency is about 30 W. Some OEMs would like to see that drop to nearly 10 W.
