Base station outdoor ground row

Overview

Due to the high propagation loss and blockage-sensitive characteristics of millimeter waves (mmWaves), constructing fifth-generation (5G) cellular networks involves deploying ultra-dense base stations (BS).

What is a x4000 5G base station?

"Stand Alone" operation is possible which enables the 5G Base station to connect remote terminals without need for external network elements. Custom designed for private 5G mobile networks using 5G FR1 radio spectrum. The X4000 5G 'All-in-One' includes Radio Unit (RU), Distributed Unit (DU) and Centralised Unit (CU).

What is x4000 5G SDR small cell outdoor base station?

X4000 5G SDR Small Cell Outdoor base stations enjoy great flexibility, high performance as well as very low cost of operation and ownership. "Stand Alone" operation is possible which enables the 5G Base station to connect remote terminals without need for external network elements.

What is a ground BS antenna?

The paper introduces a ground BS antenna design for the 5.9-8.5 GHz band. The main contributions include wide-band, high-isolation antenna array concept for the ground BS antenna, along with an analysis of how the antenna array dimension affects the signal-to-noise-and-interference ratio and throughput in ATG systems.

What is a 5G small cell base station?

5G Small Cell indoor and outdoor 'all-in-one' radio access for private 5G wireless networks. 5G Small Cell Base Stations (Micro Cell, Femtocell) offer advanced features and "stand alone" capability for private networks.
