Base station power equipment installation process

Overview

Note: Package contents vary by model. Connector Locations

Where should a base station be installed?

The location is the actual environment in which the base station will be installed. Typically, this means outside in an open sky environment (e.g. on the roof of a building or in an empty field). Figure 2 shows a typical fixed installation of several antennas, including a VeraChoke and a VeraPhase 6000, on a roof.

How do I start a base station setup?

Before starting a base station setup, the user needs to know and understand basic concepts of the base-rover setup. The location is the actual environment in which the base station will be installed. Typically, this means outside in an open sky environment (e.g. on the roof of a building or in an empty field).

What is a SE-Station and a base-station?

se-station connects other wireless devices base-station architecture includes various equipment, such as a amplifier, which converts signals from RF antenn.

Why is base station input important?

The base stations input is thus needed to calculate an accurate and reliable position. One of the determining factors in accuracy and reliability is the baseline (i.e. the distance between the rover and base receivers).

Why do Rovers need a base station?

Why is a base station needed?

In Real Time Kinematic (RTK) positioning, a rover uses the input from a local base station to accurately augment its position to centimeter level. This is done by using carrier-phase measurements of the received GNSS signals and differencing techniques.
