## Overview

---

What is arc resistant switchgear?

Unlike conventional switchgear, arc-resistant switchgear is designed with reinforced compartments that can withstand incredible pressure increases during high-energy arc faults. Arc-resistant switchgear offers a safe, proven, and cost-effective solution to the problem of arc flash events. Why do I need Arc-Resistant Switchgear?

.

What is arc-resistant switchgear?

Because arc-resistant switchgear is specifically designed to contain and limit the damage incurred from internal arc faults, it provides the highest degree of protection to personnel, long-term savings, and a significant reduction in downtime.

What is arc flash mitigation?

Innovative arc flash mitigation in less than 4 ms: the highest possible level of arc flash protection for personnel and equipment, maintenance of secure power supply and the reduction of production stoppages.

What is an arc flash?

An arc flash is an electrical explosion where energy leaves the circuit that it is contained in and travels through the air. The blast from an arc event combines voltage, heat—up to 35,000 degrees Fahrenheit—and violent concussion. Even with special PPE, those in the vicinity of an arc flash risk injury or even death.

Does Eaton offer arc flash protection?

Eaton offers electrical consultants, electricians and power system engineers a variety of tools to help design the correct solution according to IEC standards.

Arc flash risk is greatest during maintenance operations. Eaton's new NZM digital circuit breakers can be equipped with Eaton's Arcflash Reduction Maintenance System (ARMS).

What is arc flash reduction maintenance system (arms)?

Arc flash risk is greatest during maintenance operations. Eaton's new NZM digital circuit breakers can be equipped with Eaton's Arcflash Reduction Maintenance System (ARMS). ARMS' near-instantaneous reaction time greatly reduces arc flash energy and risk to personnel.
