Blown fuse in circuit breaker in Singapore

Overview

Here are the four steps you should take in the event of a problem: Restart the breaker, check for fuses and breakers, restore power from the ground, and call an electrician. Can a blown fuse be switched back on?

Unlike a circuit breaker, a blown fuse can't be switched back on. To fix it, you will need to replace the fuse with one of the same amperage rating (more on this below). Why Do Circuit Breakers Trip and Fuses Blow in the First Place?

Have you ever heard the saying "too much of a good thing?"

" This is definitely the case with electricity.

What does it mean if a fuse blows?

When a fuse blows, it means your electrical components are drawing too much power supply from the circuit board. Blown fuses are actually an uncommon issue, but they can occur during Singapore's hottest days when your AC needs to work overtime.

Where is main circuit breaker located in HDB flats in Singapore?

Background of Main Circuit Breaker in the HDB flats of Singapore Electrical wiring configurations may vary for different types of HDB units in Singapore. Most of the time, the main power supply enters the apartment via the Main Circuit Breaker (MCB), located next to the electricity meter outside the HDB unit.

How do I know if my Fuse is tripped?

If the fuse you use is still intact, check your circuit breaker first. If the fuse was flickering or blowing cold, it is probably a circuit breaker that has tripped - meaning that too many appliances are connected to one outlet or something too big plugged into one of your circuits.

Why do I need a circuit breaker?

Circuit breakers and fuses are designed to protect your electrical system by preventing too much current from flowing through it. While many homeowners are familiar with the frustration of dealing with a tripped circuit breaker or a blown fuse, few consider why these electrical issues occur in the first place.

What happens if you overload a circuit breaker?

Overloading: Don't overburden your electrical system! When you plug too many devices or appliances into one circuit, the power demand is likely to overwhelm it; resulting in a blown fuse or tripped circuit breaker. **Old Circuit Breakers or Fuses:** Older circuit breakers and fuses are not able to handle the same amounts of current as modern models.
