# China tandem circuit breaker in Us

## Overview

---

What are tandem breakers?

Tandem breakers are circuit breakers that allow for two circuits to be installed under one space in an electric panel. They're often referred to as 'cheaters' when an electric panel is filled with standard circuit breakers and more circuits need to be added.

Are tandem Breakers allowed in circuit breaker panels?

Tandem circuit breakers are not always allowed in circuit breaker panels. Check first with your local electrical inspector to determine if using tandem breakers is acceptable, and if so, how many are allowed. In most cases, when an existing panel has run out of usable space, a limited number of tandem breakers are allowed.

What are the limitations of a tandem circuit breaker?

This is impossible to do with tandem breakers. This means that tandem breakers are suitable only where both circuits are fed by individual cables, not a single cable with a shared neutral. Another limitation of the tandem circuit breaker is that it cannot take as much heat as a standard single circuit breaker.

What is the difference between a two pole breaker and a tandem breaker?

A standard two-pole circuit breaker connects to a panelboard through two poles, disconnecting both simultaneously. In contrast, tandem breakers lack this simultaneous disconnection feature. This distinction is vital when considering their safe and appropriate usage. Why Choose Tandem Breakers?

.

How do I know if a tandem breaker is compatible?

A: Check your panel's model number or refer to its diagram. The model

number's first digits and the presence of a single line in the slot in the diagram indicate tandem breaker compatibility. Maximize circuits with tandem breakers: a space-saving solution for enhanced power distribution.

Are tandem circuit breaker options available in GFCI models?

Nor are tandem breakers currently available in GFCI models, so in situations where a circuit requires either AFCI and/or GFCI protection, the only option is a standard circuit breaker. Tandem circuit breakers are not an option in these circumstances.
