Containerized industrial and commercial generators

Overview

Our Containerised Generators are ideal for exposed locations, marine environments, and oil and gas applications, offering long-term durability, enhanced security, and reduced maintenance thanks to their sealed, self-contained design. What is a containerised generator?

Our Containerised Generators deliver robust, high-capacity power from 300–3,000 kVA in secure, weather-resistant enclosures. Designed for challenging environments and critical applications, they offer noise reduction, easy transport, and bespoke configuration to meet your site's exact needs.

What is a containerized genset?

Most containerized gensets come equipped with built-in silencers and soundproof insulation, which reduces noise to acceptable levels for urban or commercial use. Containerized gensets are often designed for “plug-and-play” operation, allowing rapid setup and start-up. This is especially useful in emergency or disaster relief situations.

Are containerized generators reliable?

Years of use in the rental, oil and gas, mining and other heavy-duty industries have tested the reliability, usability and durability of our containerized generators. Our primary design challenges in developing this line of containerized generators were usability, reliability and functionality for the end user.

What is an electrical generator?

Electrical generators are pieces of critical power equipment that provide electricity when power from the power grid is unavailable. Interestingly enough, generators don't actually create electricity.

Why should you choose a containerised generator?

Containerised Generators are trusted across industries where reliability and

resilience are non-negotiable, such as Healthcare and Rail infrastructure. Every unit can be tailored to your project with options for fuel type, noise attenuation, and space-saving layout.

What is a diesel generator?

Diesel generators are those that are run on diesel, and can typically be divided into two basic parts: a diesel engine and an electrical generator. Diesel generators can be used to provide power to places that are not powered by a power grid or can be used as a backup in case of a power outage.
