

Solar Storage Container Solutions

**Cote d Ivoire has a full range of
uninterruptible power supply
models**

Overview

Will solar power supply increase in Côte d'Ivoire by 2050?

We develop a TIMES model of the electricity sector for Côte d'Ivoire that provides least-cost solutions for power systems. Our estimates show that electricity demand could increase by a factor of 4.5 by 2050. Least cost solutions show that solar PV could provide at least 18% of total electricity generation in 2050.

Does Côte d'Ivoire export electricity?

Côte d'Ivoire is the third largest electricity market in West Africa and has historically been a net exporter of electricity with 11.8% of its total electricity generation sold to Mali, Burkina Faso, and Ghana in 2019 (ANARE-CI, 2020). 2.1.2. Future cost assumptions Fig. 2 presents the long-term cost assumption for our analysis.

Will Côte d'Ivoire have an energy mix in 2050?

This scenario aims to mimic an energy mix in 2050 similar to that of today, where gas represents roughly two-third of the total supply. As previously states, natural gas has the advantage of a well-structured and familiar decision-making process and value chain in Côte d'Ivoire.

Will Côte d'Ivoire have a coal-fired power plant?

These aspects are left for further research. This coal-fired power plant is expected to be the first ever built in Côte d'Ivoire. Note that the implicit price of carbon for the other scenarios is not worth studying because they show CO₂ emissions in 2050 below the Paris Agreement target.

Will Côte d'Ivoire have a low-cost solar system?

In the case of a low-cost solar scenario, PV capacity is up to 24 GW and storage is nearly 15 GW between 2030 and 2050. In closing its economic gap with emerging markets, Côte d'Ivoire will face a substantial increase in

electricity demand over the next three decades.

Where does electricity come from in Côte d'Ivoire?

As natural gas is the main source of electricity production in Côte d'Ivoire to date, we pay particular attention to its modeling. Its supply comes either from national gas reserves, via the West Africa Sub-Regional Gas Pipeline (WAGP), or from international gas reserves in the form of liquefied natural gas (LNG).
