EK-ac180 outdoor power solar panel

Overview

How many watts a solar panel will a ac180 get?

Collected the solar panel for the ac180. Install soon hopefully the weather will be better tomorrow so I can test the number I get from it. Based on the specs of the panel and the AC180, on a good day with it angled right for the sun, you probably will only get about 385 of the 505 watts.

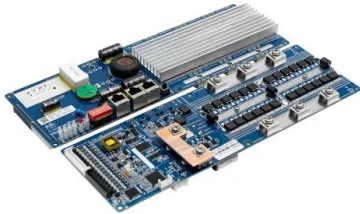

How do I connect two panels to ac180?

The panels are 18V and 5.56 A thx for the help Please read the panel specifications thoroughly and confirm that 18 volt is the VoC. Take 2 panels and connect them in series. Take the other 2 panels and connect them in series. Of the resulting 2 pairs, connect both of them in parallel to the AC180 with two t-branch connectors (2 to 1).

How much power does an ac180 get?

The AC180 might get a bit more, but I'm basing this the Vmp of the panel (38.53v) and the AC180's current limit of 10 amps. The good news is, since you've overpaneled, when the suns not great, you should still get some decent power out of it. Keep us posted on how it does.
