What is a sodium sulphur battery system?

**ec rochemical Energy Sto criptionPhysical principles**  
sodium-sulphur (NaS) battery system is an energy storage system based on electrochemical charge/discharge reactions that occur between a positive electrode (cathode) that is typically made of molten sulphur (S) and a negative electrode (anode) that is typicall.

How NaS batteries contribute to the energy transition?

With NAS batteries, we contribute to the energy transition by meeting our customers' need for stable, safe, and efficient power through storage. We are the exclusive distributor of NAS batteries, which are manufactured by our partner, NGK Insulators Ltd., Japan. Our team supports you in customizing energy storage solutions for individual use cases.

What is a complete battery energy storage solution?

A complete battery energy storage solution includes the power converter itself, the batteries, the medium voltage transformer and the switching devices as well as the energy management system. Find out more about AEG Power Solutions by following this link.

What are NaS batteries used for?

Moreover, the NAS battery system can be used as an emergency power supply in power outages and during momentary drops in voltage. NAS batteries are increasingly being utilized in stabilising output from wind and solar power generators whilst supporting the spread of renewable energies and establishment of the smart grid.
