

Solar Storage Container Solutions

Energy storage container application 6 25MWh

Overview

What is Tener energy storage?

This system has been touted as an innovative solution within the energy storage landscape. Let's delve into the details to understand what it is and its novelty : TENER achieves 6.25 MWh of energy storage in a standard 20-foot container, translating to an exceptional energy density of 420 kWh/m².

What makes Tener a great energy storage system?

CATL's cutting-edge cell technology supports the outstanding performance of the system. TENER is equipped with long service life and zero-degradation cells tailored for energy storage applications, achieving an energy density of 430 Wh/L, an impressive milestone for LFP batteries used in energy storage.

Which energy storage system has zero degradation?

CATL unveiled TENER, the mass-producible energy storage system with zero degradation in the first five years of use in Beijing, China.

What is energy storage & why is it important?

Energy storage is a pivotal element of the green energy transition. CATL has steadfastly dedicated itself to delivering world-class energy storage solutions for customers around the world.
