# Factory price bus tie breaker in Croatia

## Overview

---

What is a bus tie breaker power management system?

The power management system also ensures that enough power is available on each busbar section after the bus tie breaker opens. A DEIF power management system can include as many Bus tie breaker controllers as necessary. Part of the versatile PPM 300 range.

How many bus tie breaker controllers can a Deif power management system include?

A DEIF power management system can include as many Bus tie breaker controllers as necessary. Part of the versatile PPM 300 range The PPM 300 Bus tie breaker controller is part of the DEIF PPM 300 range of versatile controllers with built-in multi-master power management features.

What is a bus tie breaker controller?

The controller is designed to be part of a DEIF power management system which ensures that all breaker operations are carried out in a fast, efficient, and safe manner: Before closing the bus tie breaker, the power management system synchronises the busbar sections, and before opening the bus tie breaker, the system de-loads the bus tie breaker.

What is a tie breaker?

A tie breaker is a type of circuit breaker that connects two sections of an electrical bus serving different power sources. They are commonly used to connect electrical systems to power sources and load circuits, as well as to protect people and equipment from overcurrents.

What is a PPM 300 bus tie breaker controller?

The PPM 300 Bus tie breaker controller is designed for controlling a single bus tie breaker and supports ring busbar connections.

What is a bus tie breaker interlock?

The bus tie breaker interlock prevents the main generators and the emergency generator from being connected to the emergency switchboard at the same time. This helps to prevent electrical accidents. Shore supply can be used to power the ship's electrical system when the ship is docked.
