

## Solar Storage Container Solutions

# Fiji installs solar air conditioner

## Overview

---

Do you need air conditioning in Fiji?

The heat and humidity can be oppressive, making air conditioning a must-have in homes and businesses. Air conditioning systems in Fiji typically use split systems, with an outdoor condenser and an indoor evaporator or fan coil. These systems are often installed with a ducted system that distributes cold air throughout the home or business.

How do air conditioning systems work in Fiji?

Air conditioning systems in Fiji typically use split systems, with an outdoor condenser and an indoor evaporator or fan coil. These systems are often installed with a ducted system that distributes cold air throughout the home or business. Many systems also feature a dehumidifier that helps to reduce humidity levels in the space.

When was the first off-grid solar system installed in Fiji?

In May 2002 Clay Energy commissioned the first off-grid solar base station power system for Vodafone Fiji, which led to the rollout of these power systems to six mobile operators in the region. Clay Energy's first PV grid-connect system (18kW) was installed and commissioned in 2008, being the first in the region.

Why is air conditioning important in Fiji?

This includes cleaning and changing filters, checking for refrigerant leaks, and inspecting the system for any issues. Additionally, air conditioning systems should be serviced regularly to keep them running smoothly and efficiently. Overall, air conditioning in Fiji is essential for keeping cool in the tropical climate.
