

## Solar Storage Container Solutions

# Greek energy storage new energy battery manufacturer

## Overview

---

Elsewedy Electric has achieved a major milestone by securing financial backing for Greece's first large-scale battery energy storage system. Will Greece install 900 MW of storage by 2030?

According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030. Thus far, 900 MW has been allocated via the Greek Regulatory Authority for Energy, Waste, and Water (RAAEY) tenders. Therefore, the remaining share would be delivered under the new plan but without any subsidy support.

How many companies have won government support for a battery project?

Seven companies have won government support for 11 standalone battery projects at Greece's second energy storage auction, where 300 MW was offered.

How much power will Greece have by 2030?

The government now aims for 2.65 GW of battery projects on the transmission grid and a further 900 MW on the distribution grid. According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030.

Is a 'fever' gripping the new energy storage sector?

An investment 'fever' is gripping the new energy storage sector as the ministerial decision was published yesterday (March 14, 2025), setting the rules for installations with a total capacity of 4.7 GW in our country. So far, three auctions have supported 900 MW projects with subsidies.

How many MW of battery storage will be installed on the ADMIE grid?

These will be supplemented by the 4.7 GW from the ministerial decision, which pertains to commercial battery storage units operating in the market without subsidies. According to the decision by the Ministry of Environment

and Energy, 3,800 MW will be implemented on the ADMIE grid plus another 900 MW on the DEDDIE distribution network.

Should we add batteries to the energy grid?

The reasoning is to create more space in the electricity grid and maximize installed capacity, in pursuit of the goal of an 80% renewables share by 2030, from the revised National Energy and Climate Plan (NECP). Investors have expressed concern that adding batteries would increase project costs and erode returns.
