A 3000W solar system can run appliances in a small, 2 bedroom house including a TV, microwave, refrigerator, fans and lights. A 3750W inverter is required for solar systems with a 3000W rated output. The following is the estimated consumption of various appliances and devices. Check your

appliances for the specific watt consumption.

How many solar panels do you need to run a 3000W system?

Actually you will need 15 solar panels to run a 3000W system. Here's why. Solar panel ratings are based on peak output. So when a panel is rated at 250 watts, that is peak performance. But orientation, location, panel angle, sunlight availability affect the results. Bottom line is, solar panels don't always reach peak output.
