How to choose a home solar system

Overview

How do I choose a solar energy system?

With this in mind, choosing which solar system suits you depends solely on your purpose. Passive energy is the way to go if you live in a relatively warm area and do not require much internal heating. However, if you need a more efficient and reliable heating system for your house, you will need to invest in active solar energy.

How to choose a solar inverter for your home?

As you search for the right solar system for your home, it's essential to choose an inverter suitable for your needs and electricity usage. String inverters have the lowest price point but the most limitations when it comes to their traditional, dated technology and factors like shading, expansion and system monitoring.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

Should I buy or install a solar system?

Assess Your Options for Using Solar Purchasing and installing a system that you fully own and maintain is no longer the only option if you want to go solar. Even if you rent your home or don't want to purchase a rooftop system, there are many programs will enable you to still benefit from solar electricity.

Are solar panels a good investment?

Great news: solar panel systems have advanced significantly over the years and are now more efficient and easier to install than ever! With more

homeowners and commercial property owners choosing to go solar, prices of solar power systems are dropping yearly and the technology is evolving rapidly.

How do I calculate how many solar panels I Need?

First, determine what size solar power system you need for your home. Then, request an estimate and a roof or ground layout analysis. Refer to your electricity bills for the past 12 months to calculate your average kWh per month. We built a handy tool to help you calculate how many solar panels you need.
