Italian 21700 lithium battery pack

Overview

What is a 21700 battery?

A 21700 battery is a high-capacity, rechargeable lithium-ion cell designed for superior energy efficiency and performance. With a standard size of 21mm in diameter and 70mm in length, these batteries were developed as a next-generation improvement over 18650 cells, offering increased power output, extended runtime, and higher energy density.

What is a 21700 lithium-ion battery?

A 21700 lithium-ion battery is the next generation of batteries, powering the mainstream electric vehicles that cruise the road today. Farina uses a genuine LG 21700 cell, resulting in more sustainable and reliable runtime than a typical 18650 battery.

What is an unprotected 21700 battery?

Unprotected 21700 Batteries: Designed for battery packs or high-performance applications where external battery management systems (BMS) handle protection. 21700 batteries are becoming the industry standard for devices requiring longer runtime and more power. Some common applications include:.

How many times can a 21700 battery be recharged?

Most 21700 batteries can be recharged between 300 and 500 times before their capacity is depleted to a point where they are no longer operating efficiently. They also have a safe, stable shelf life of 3 to 5 years!.

What is a 21 mm battery?

With a standard size of 21mm in diameter and 70mm in length, these batteries were developed as a next-generation improvement over 18650 cells, offering increased power output, extended runtime, and higher energy density. They are widely used in electric vehicles, industrial equipment,

flashlights, and renewable energy storage.

Do high capacity lithium batteries need a PCB?

High capacity lithium batteries usually require a PCB (Protection Circuit Board) or other kinds of protection (like a PTC aka Resettable Fuse, and a CID Pressure Valve) to limit over charging, discharging, high temperatures and internal pressure.
