Metal clad switchgear factory in Iran

Overview

What is an electrical panel (switchgear)?

An electrical panel (switchgear) is a metal enclosure that holds a variety of electrical equipment. The main function of switchgear is to control electrical energy, protect other devices and equipment, and control the safe and simple electrical system of a complex. Making electrical panels requires high expertise and skills.

How to build a switchgear?

Welding, cutting, bending and drilling of the body At this stage, based on the plan provided by the design and engineering unit, the production team will cut and build with stainless steel for the body of the switchgear. The thickness of the steel in this case is usually between 1.5 to 2.5 mm.

How thick is a stainless steel switchgear?

At this stage, based on the plan provided by the design and engineering unit, the production team will cut and build with stainless steel for the body of the switchgear. The thickness of the steel in this case is usually between 1.5 to 2.5 mm. The difference in this number depends on the type of application and the place of use of the device.
