Moscow power system ups uninterruptible power supply

Overview

Which power supply systems are used in Russia?

The power supply systems are fully agreed with the operational conditions, accepted on the territory of the Russian Federation. Only the modern high tech units are used for the power supply system production, supplied by Eaton. UPS.

What is an uninterruptible power supply system (UPS)?

UPS. The modern uninterruptible power supply systems (UPS) are designed for the equipment protection from all possible problems that may occur in the power grid. Our UPSs are the ideal devices for the protection systems where the grid failure may have the catastrophic character.

What are the applications of uninterruptible power supply devices in a container?

Uninterruptible power supply devices in a container. A range of charging stations for electric vehicles. Block-modular inverter installations for solar energy. Application: PC, servers, telecommunication systems, industrial controllers, protection systems and automatics, security and access systems.

What is UPM power supply?

UPM is a system of guarantee power supply of industrial application with capacity from 10 to 120 kVA used for ensuring the smooth operation of CNC machines, technological equipment, oil pumping stations and other production facilities.

How to design ups power & battery capacity & GPD equipment?

UPS power, battery capacity and GPD equipment are determined in design process according to technical specifications of the customer. Power modules with the capacity of 1000, 2000 and 3000 W and output voltage of 24 or 48 V that allow to design UPS DC system with capacities from 1000 W to 36 kW in a

single cabinet.

Is Parus electro compatible with domestic operating systems?

Parus electro conducted joint testing and received a conclusion on compatibility with a number of domestic operating systems. Power from 7 to 320 kW with the possibility of modular expansion in the charging hub. Full-cycle development and production since 2015 in Moscow.
