# Solar Remote Control Garden Sprinkler System

## Overview

---

What is a solar powered 'smart' WiFi controlled irrigation system?

**Solar Powered 'Smart' WiFi Controlled Irrigation System:** This project makes use of standard DIY solar and 12v parts from ebay, along with Shelly IoT devices and some basic programming in openHAB to create a homemade, fully solar powered, smart garden power grid and irrigation setup. System Highlights: .

Do I need a remote control for my sprinkler system?

Unfortunately, most sprinkler system controllers are still dumb devices that only operate with a fixed schedule set at the control panel. What I need is a remote control that I can use to turn on or off the sprinkler from a remote location, or at least the comfort of my living room.

What is a rainpoint Gen 2 drip irrigation system?

Keep plants thriving effortlessly with the RainPoint Gen 2 WiFi Drip Irrigation System! Features solar power, even water distribution, smart app control, and auto shut-off. Perfect for balconies, gardens, RVs & vacations.

What is smart irrigation?

'Smart' Irrigation, use set automatic watering system, with links to weather API to check recent rain fall. Why this design?

1) I was looking at irrigation systems for my vegetable garden and found that they were either very expensive, or fairly limited in function (just on/off at a set time for a single hose).

How do I create a smart irrigation system?

The first step for creating the automated smart irrigation system is to create a valve control system. The valves I used for this project are basic, normally closed, 12V DC, 1/2" Solenoid valves. These are easily obtainable from eBay

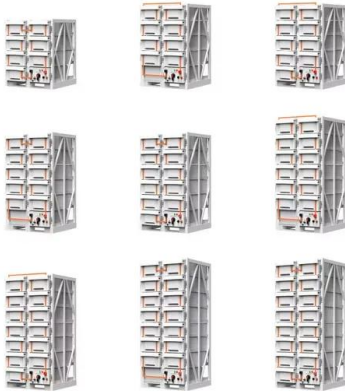

relatively cheaply. Different dimensions are available also.

How does the automatic irrigation system work?

System calculates how much water will be used for each irrigation cycle (important if you are using water-butts collecting rain water like i am! Push notification to your phone to alert you when the automatic irrigation is about to run.
