South American office building energy storage device

Overview

What are the opportunities for battery energy storage systems in Latin America?

The opportunities for battery energy storage systems are growing rapidly in Latin America. Below are some key details for those who want to understand and succeed in the BESS market. In 2010, the IEA projected that the world would reach its 2019 solar penetration only in 2035. Analysts underestimated solar adoption by 16 years.

Will Chile pay a capacity payment for energy storage projects in 2024?

Chile passed an energy storage and electromobility bill in late 2022, making stand-alone storage projects profitable for operators. However, the market is still awaiting new rules regarding a capacity payment for storage projects—expected in 2024.

Is energy storage legal in Brazil?

Brazil's regulatory framework does not prohibit energy storage solutions, but there are currently no specific regulations on storage. At the end of 2023, most BESS applications in Brazil were behind the meter. There is a proposed law on energy storage to encourage front-of-the-meter BESS, but Congress has not prioritized its approval.

How much battery capacity will Latin America have by 2023?

While the U.S. was expected to have nearly 60 GWh of installed battery capacity by the end of 2023, AMI estimates that Latin America had less than 1 GWh of operational BESS projects—a 60x difference. This large gap will be bridged at different speeds based on each country's specific regulations.
