

## Solar Storage Container Solutions

# Tips for installing photovoltaic panels on flat roofs

## Overview

---

Can solar panels be installed on a flat roof?

Flat solar panels, however, can collect dirt and must be cleaned regularly to function correctly. On flat or low-pitch roofs, one solution is to install the panels at a slight tilt – 3 to 4 degrees – to prevent water pooling and to help keep the panels clean. The other main issue with installing solar panels on a flat roof is leakage.

Are flat roof solar panels a good investment?

You'll have to choose the mounting option that's right for your property and energy needs, but provided you pick the right one and get panels with a good efficiency rating, a flat roof solar array can be an outstanding investment. Plus, some mounting options could end up being more affordable than an installation on a sloped roof.

How do you install solar on a flat roof?

Solar installations on flat roofs can be done using three different racking systems: a traditional rack that gets mounted to the roof using penetrations, an angled rack that uses the same method and a ballasted rack that gets held in place using weights.

How much does a flat roof solar system cost?

The price of a flat roof solar array averages around \$29,970 before any incentives or \$20,979 after the federal investment tax credit (ITC). Your costs depend on two primary cost factors, though, which can bring the total price above or below what you'd expect to pay for a standard sloped-roof system.

How does a flat roof PV system work?

Flat-roof PV systems can be installed using penetrations as well, but they can also use a ballasted mounting system, which uses weights to keep the system in place. This keeps the risk of roof leaks low, which is great since flat roofs

are naturally more prone to leaking.

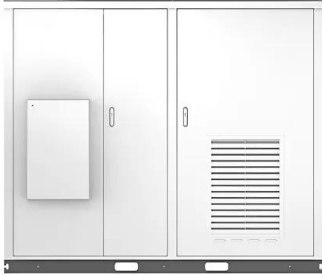

Which side of a roof should a solar panel face?

The optimal setup is having the panels face south. However, if your roof faces east or west, or you can only install panels on the north side, your system will generate less electricity daily. Additionally, the steepness of a sloped roof can affect energy production.
