Where can I buy solar & wind power inverters?

Woot! Online shopping for Solar & Wind Power Inverters from a great selection at Patio, Lawn & Garden Store.

What is a wind inverter?

A wind inverter converts DC from your generator or turbine into AC (at 230V 50Hz) as required for conventional appliances and for feeding back into the grid.

What are the advantages of a 40 point programmable inverter?

Product advantages: · 40 point programmable, linearly extrapolated power curve, via inverter display, to match the output of a specific wind turbine. · Ultra wide input voltage range from 20V up to 750V. · Able to respond to very quick input voltage change and very fast output power response as well. Use current controlled PWM inverter.

Is a wind turbine inefficient?

However, the slow speed means it is inefficient. The answer is no. The size of the wind turbine is very large. A conventional power generation blade can reach 30 meters long, and the diameter when rotating is 60 meters, which is a full 20 stories high.

How fast does a wind turbine turn?

Generally, the blades of wind turbines turn about 20 to 30 times per minute, which is less than 1/10 of the speed of electric fans in life. However, the slow speed means it is inefficient. The answer is no. The size of the wind turbine is very large.

What is MPPT & why should you use a GCI inverter?

MPPT algorithms also allow maximum performance when used with PV systems. Maximize your output and minimize your payback period with a GCI inverter today. Product advantages:
